PROJECTS

leakkill (formerly secretsan) — open-source tool on PyPI (`pip install leakkill`) | github.com/ayushanand27/leakkill

- Built a tool that detects leaked API keys before commit and in full git history, then verifies, revokes and reports them.
- Wrote documentation and install steps so users could adopt it without support, and tested it end to end with real GitHub and Discord credentials.
- Traced and fixed bugs across CI, tests and integrations: the same troubleshooting and escalation mindset needed in product support.
